

Yin (Stanley) Cheung

Backend / Full-stack / AI Engineering | Fall 2026 & Winter 2027 internships

Vancouver, BC | [linkedin.com/in/yinstanleycheung](https://www.linkedin.com/in/yinstanleycheung) | github.com/cheuyin | yinstanleycheung@gmail.com

EDUCATION

The University of British Columbia

September 2022 – May 2027

B.Sc. Computer Science | Average 88%

Vancouver, BC

- **Courses:** Machine Learning, Computer Networking, Relational Databases, Algorithms & Data Structures
- **Awards:** 2025 Dean's List, 2024 Charles & Jane Banks Scholarship, 2023 Dean's List

EXPERIENCE

Software Engineer Intern

January 2024 – July 2024

VoltSafe Inc. | TypeScript, Express.js, PostgreSQL, AWS, React

Vancouver, BC

- Shipped RBAC for an internal admin dashboard with AWS Cognito so staff only reached the routes and data their role allowed.
- Dockerized a Prometheus monitoring service for CPU, RAM, and disk on 7+ EC2 web and database servers; the React client polled a REST API with React Query.
- Built an S3-backed file API for a marina management app so document and image uploads did not go through the app server.
- Cut the marina app JS bundle 22% by pruning unused static assets after a Lighthouse pass.

PROJECTS

CreateYourStory.ai | Python, FastAPI, React, SQLite

[GitHub](#)

- Built a FastAPI background-job pipeline for LLM and image generation with persisted job status so the React client could poll instead of blocking on one long request.
- Validated model output as a Pydantic story graph (nodes, choices, endings) before saving, so broken generations failed closed instead of writing junk to SQLite.
- Added JWT/Argon2 auth, guest sessions, and ownership checks so saved stories stayed private to their owner.
- Covered the backend with 13 tests, including mocked model calls, that run in CI.

AutoDater | TypeScript, Obsidian API

[Plugin](#)

- Shipped an Obsidian community plugin that writes Created/Updated dates into note frontmatter (~350 downloads).
- After a Reddit post (~33k views), added date-format options, folder exclusions, and renameable property labels from user feedback; a 6-second debounce avoids extra writes while typing.

Local AI Coding Agent | Python, Gemini API

[GitHub](#)

- Built a Gemini agent loop that calls sandboxed file tools (read, write, run, delete) for up to 20 rounds until the task finishes.
- Validated every file-tool path against the working directory and rejected any that would escape it, so a bad tool call could not reach the rest of the filesystem.
- Persisted sessions to JSON so runs can resume after a stop.

SKILLS

Languages: Python, TypeScript, SQL, Java

Frameworks: FastAPI, Express.js, React, LangChain

Other: PostgreSQL, Docker, AWS, Prometheus, Linux, Git

Certifications: AWS Certified Cloud Practitioner
